

LynxNet4iO

Network Input / Output controller Device

Output Devices

Features

- Install a LynxNet4iO anywhere on your network
- Simple installation - just power and network connection
- Four relay outputs
- Four dry contact inputs

The **LynxNet4iO** is a input / output controller with 4 relay outputs and 4 dry contact closure inputs. The 4 inputs send alarm messages to the LynxGuide Server and can activate any of the Lynx system output devices. The 4 output relays are controlled by the LynxGuide server and can be activated by any of the Lynx system input devices.

The 8 amp power relay model allows for direct control of devices requiring power to be switched for activation. The 1 amp relay model, has gold relay contacts to allow for control of devices that require a dry contact closure. Both models come configured for Normally Opened operation, but can be factory configured for Normally Closed operation. Simple to install, requires network connection and power. A 12 VDC power supply is included.
